

Acme New Feature Guide

Sample document for Lumen M1 demo (Act 3)

This is a tiny sample PDF used during the end-to-end demo of the Lumen AI Support Agent (Stage 9.12). The full demo script lives at docs/demo-script.md.

Goal: exercise the Acme KB upload flow end-to-end.

1. The admin uploads this file via /kb -> New article -> Upload.
2. The backend parses the PDF, splits it into chunks, and generates embeddings via OpenAI text-embedding-3-small.
3. Chunks are upserted into Qdrant under the tenant + KB filter.
4. A subsequent customer question that matches this content will be answered by the LangGraph RAG agent and cite this article id in the suggestions pane.

The doc body is intentionally short so indexing finishes well under the 30s window the demo relies on.
